Montréal, QC | Post-Graduation Work Permit (PGWP)

DATA ANALYST | PYTHON, SQL & MACHINE LEARNING

Recent Honours Computer Science graduate with hands-on experience in data analysis, machine-learning prototyping and multimodal LLM evaluation. Built a Python/Oracle transaction-monitoring proof of concept for fraud-risk scoring and recurring-pattern detection. Comfortable turning raw data into clear findings, documented workflows and practical recommendations.

EDUCATION

Honours Bachelor of Science in Computer Science - Management & Entrepreneurship Option | *University of Ottawa* - Ottawa, ON | 2022 - 2026

French Baccalaureate (STEM), with honours | *Louis Massignon International High School* - Casablanca, Morocco | 2017 - 2022

TECHNICAL EXPERIENCE

AI Data Annotator - LLM Evaluation | *Outlier* - Remote | Oct 2025 - Apr 2026

- Evaluated and ranked 50+ multimodal LLM outputs per week across image, video-understanding and editing scenarios using detailed quality rubrics.
- Wrote concise, evidence-based rationales for ambiguous and edge cases, helping maintain consistency across repeated evaluations.
- Documented recurring failure patterns and guideline interpretations in structured notes that support prompt and reference-answer improvements.

Data Analyst Intern - Payments / Fraud POC | *HPS* - Casablanca, Morocco | May 2025 - Jul 2025

- Built an end-to-end transaction-monitoring POC with Python and Oracle for fraud-risk scoring and recurring-transaction detection.
- Engineered 12 interpretable behavioural and time-based features, including client and merchant baselines, transaction intervals and delta-to-average signals.
- Implemented a StandardScaler and Isolation Forest pipeline, wrote fraud scores and flags back to Oracle, produced EDA visuals and exported flagged records to CSV.

SELECTED PROJECTS

- **Fraud & Recurrence in Transactions using Machine Learning** - *Python, pandas, scikit-learn, Oracle SQL, Matplotlib, Seaborn*. Developed an anomaly-detection prototype for suspicious and recurring transactions, iterating on features and thresholds to improve detection quality.
- **AI / ML / DL Coursework** - *Python, Jupyter, NumPy, pandas, scikit-learn*. Built reproducible notebooks covering preprocessing, training, evaluation and tuning, with model comparisons, clear metrics and structured write-ups.
- **Multi-role Android Application** - *Java, Android Studio, XML, Git/GitHub*. Developed an application for administrators, employees and clients with service CRUD, branch search and permission-aware navigation.

CUSTOMER-FACING EXPERIENCE

Customer Service & Sales | *Pandora* | *Hudson's Bay* | *Rogers through Cydcor* - Ottawa, ON | 2022 - 2026

- Handled 50+ customer inquiries per day and resolved 95% on the first interaction by clarifying needs and prioritizing issues.
- Prospected 20+ clients per day and averaged 4-5 telecom sales per day while consistently meeting sales targets.

LEADERSHIP & VOLUNTEERING

Founder & Team Lead | *Team Matrix* - Casablanca, Morocco | 2017 - 2022

- Led a 10-member robotics team through FLL and WRO competitions in six countries and mentored younger team members.

Volunteer | *Nord-Sud Action* - Casablanca, Morocco | 2021 - 2022

- Helped distribute 200+ meals, supported 50+ children per visit and participated in clean-ups collecting more than 100 kg of waste.

SKILLS

Data & ML: Exploratory data analysis, feature engineering, anomaly detection, model evaluation, data visualization

Technical: Python, pandas, NumPy, scikit-learn, SQL, Oracle, PL/SQL, Jupyter Notebook, Matplotlib, Seaborn, Git/GitHub

Professional: Technical writing, requirements clarification, troubleshooting, stakeholder communication

Languages: French (native), English (fluent), Arabic (fluent), Spanish (intermediate)
